

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are used on lift masts to be able to help them perform in tough environmental conditions. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Therefore, the lift masts' guidance arrangements have to be specifically strong and have a particular high load carrying capability.

So as to help compete in lots of various environmental conditions, carriage rollers were designed for several lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
